(57) There are provided N-arylhydrazine derivatives of formula I

(I)

the use thereof for the control of insect and acarid pests and methods and compositions for the protection of crops from the damage and loss caused by said pests.

BACKGROUND OF THE INVENTION

Certain insect and acarid pests are harmful and cause enormous losses annually in agricultural crops, stored products and human and animal health. It is an object of this invention to provide substituted N-arylhydrazine derivatives which are effective agents for the control of pestiferous insects and acarina.

It is another object of this invention to provide a method for the protection of important agronomic crops from the harmful and damaging effects caused by insect and acarid pests.

It is a further object of this invention to provide insecticidal and acaricidal compositions.

SUMMARY OF THE INVENTION

The present invention provides a method for the control of insects or acarina which comprises contacting said insects or acarina or their food supply, breeding ground or habitat with an insecticidally effective amount of an N-arylhydrazine derivative of formula I

wherein

A

is C-R₄ or N;

B

is C-R₅ or N;

W

is C-R₆ or N with the proviso that one of A, B or W must be other than N;

Y

is hydrogen, halogen, CN, NO₂, C₁-C₆ alkyl, C₁-C₆ haloalkyl, C₁-C₆ alkoxy or C₁-C₆ haloalkoxy;

n

is an integer of 0, 1 or 2;

Q

is

R

is hydrogen, C₁-C₁₀ alkyl optionally substituted with one or more halogens, C₃-C₆ cycloalkyl, C₁-C₄ alkoxy, C₁-C₄ haloalkoxy, (C₁-C₄ alkyl)SO_x, (C₁-C₄ haloalkyl)SO_x, phenyl optionally substituted with one to three halogen, C₁-C₄ alkyl, C₁-C₄ haloalkyl, C₁-C₄ alkoxy, C₁-C₄ haloalkoxy, (C₁-C₄ alkyl)SO_x, (C₁-C₄ haloalkyl)SO_x, NO₂ or CN groups, or phenoxy optionally substituted with one to three halogen, C₁-C₄ alkyl, C₁-C₄ haloalkyl, C₁-C₄ alkoxy, C₁-C₄ haloalkoxy, (C₁-C₄ alkyl)SO_x, (C₁-C₄ haloalkyl)SO_x, NO₂ or CN groups,

C₃-C₁₂ cycloalkyl optionally substituted with one or more halogens, C₁-C₆ alkyl, C₁-C₆ haloalkyl, C₁-C₄ alkoxy, C₁-C₄ haloalkoxy, (C₁-C₄ alkyl)SO_x, (C₁-C₄ haloalkyl)SO_x, phenyl optionally substituted with one to three halogen, C₁-C₄ alkyl, C₁-C₄ haloalkyl, C₁-C₄ alkoxy, C₁-C₄ haloalkoxy, NO₂ or CN groups, or phenoxy optionally substituted with one to three halogen, C₁-C₄ alkyl, C₁-C₄ haloalkyl, C₁-C₄ alkoxy, C₁-C₄ haloalkoxy, NO₂ or CN groups, or

phenyl optionally substituted with one or more halogen, C₁-C₄ alkyl, C₁-C₄ haloalkyl, C₁-C₄ alkoxy, C₁-C₄ haloalkoxy, NO₂ or CN groups; are each independently hydrogen or C₁-C₄ alkyl;

R₁ and R₂

R₃ and R₁₆

are each independently hydrogen,

C₁-C₁₀alkyl optionally substituted with one or more halogen, hydroxy, C₁-C₄alkoxy, (C₁-C₄alkyl)SO_x, CONR₇R₈, CO₂R₉, R₁₀, R₁₁, C₃-C₆cycloalkyl optionally substituted with one to three halogen, C₁-C₄alkyl, C₁-C₄haloalkyl, C₁-C₄alkoxy, C₁-C₄haloalkoxy, NO₂ or CN groups,

phenyl optionally substituted with one or more halogen, C₁-C₄alkyl, C₁-C₄haloalkyl, C₁-C₄alkoxy, C₁-C₄haloalkoxy, CO₂ or CN groups, or pyridyl optionally substituted with one or more halogen, C₁-C₄alkyl, C₁-C₄haloalkyl, C₁-C₄alkoxy, C₁-C₄haloalkoxy, NO₂ or CN groups,

C₃-C₁₀alkenyl optionally substituted with one or more halogen, hydroxy, C₁-C₄alkoxy, (C₁-C₄alkyl)SO_x, CONR₇R₈, CO₂R₉, R₁₀, R₁₁, C₃-C₆cycloalkyl optionally substituted with one to three halogen, C₁-C₄alkyl, C₁-C₄haloalkyl, C₁-C₄alkoxy, C₁-C₄haloalkoxy, NO₂ or CN groups,

phenyl optionally substituted with one or more halogen, C₁-C₄alkyl, C₁-C₄haloalkyl, C₁-C₄alkoxy, C₁-C₄haloalkoxy, CO₂ or CN groups, or pyridyl optionally substituted with one or more halogen, C₁-C₄alkyl, C₁-C₄haloalkyl, C₁-C₄alkoxy, C₁-C₄haloalkoxy, NO₂ or CN groups,

C₃-C₁₀alkynyl optionally substituted with one or more halogen, hydroxy, C₁-C₄alkoxy, (C₁-C₄alkyl)SO_x, CONR₇R₈, CO₂R₉, R₁₀, R₁₁, C₃-C₆cycloalkyl optionally substituted with one to three halogen, C₁-C₄alkyl, C₁-C₄haloalkyl, C₁-C₄alkoxy, C₁-C₄haloalkoxy, NO₂ or CN groups,

phenyl optionally substituted with one or more halogen, C₁-C₄alkyl, C₁-C₄haloalkyl, C₁-C₄alkoxy, C₁-C₄haloalkoxy, CO₂ or CN groups, or pyridyl optionally substituted with one or more halogen, C₁-C₄alkyl, C₁-C₄haloalkyl, C₁-C₄alkoxy, C₁-C₄haloalkoxy, NO₂ or CN groups,

C₃-C₁₂cycloalkyl optionally substituted with one or more halogen, hydroxy, C₁-C₄alkoxy, (C₁-C₄alkyl)SO_x, CONR₇R₈, CO₂R₉, R₁₀, R₁₁, C₃-C₆cycloalkyl optionally substituted with one to three halogen, C₁-C₄alkyl, C₁-C₄haloalkyl, C₁-C₄alkoxy, C₁-C₄haloalkoxy, NO₂ or CN groups, phenyl optionally substituted with one or more halogen, C₁-C₄alkyl, C₁-C₄haloalkyl, C₁-C₄alkoxy, C₁-C₄haloalkoxy, CO₂ or CN groups, or pyridyl optionally substituted with one or more halogen, C₁-C₄alkyl, C₁-C₄haloalkyl, C₁-C₄alkoxy, C₁-C₄haloalkoxy, NO₂ or CN groups or

may be taken together to form a ring represented by the structure

R₄, R₅ and R₆R₇, R₈ and R₉
R₁₀

are each independently hydrogen, halogen, CN, NO₂, (C₁-C₄alkyl)SO_x, (C₁-C₄haloalkyl)SO_x, C₁-C₆alkyl, C₁-C₆haloalkyl, C₁-C₆alkoxy or C₁-C₆haloalkoxy; are each independently hydrogen or C₁-C₄alkyl; is NR₁₂R₁₃,

R₁₁

is

R_{12} , R_{13} , R_{14} and R_{15} are each independently hydrogen or C_1 - C_4 alkyl;
 X_1 is chlorine, bromine, or fluorine;
 X is O, S or NR_{14} ;
 r is an integer of 0 or 1;
 p and m are each independently an integer of 0, 1, 2 or 3 with the provisos that only one of p , m or r can be 0 and that the sum of $p + m + r$ must be 4, 5 or 6;
 x is an integer of 0, 1 or 2; or
 the acid addition salts thereof, with the proviso that when Q is

R is C_1 - C_5 alkyl and X_1 is chlorine, then either at least one of A , B or W must be N or R_4 , R_5 , R_6 and Y must be other than hydrogen and n must be 0 and with the further proviso that when Q is

R is phenyl or substituted phenyl and X_1 chlorine, then at least one of A , B or W must be N .

The present invention further provides N-arylamidrazone compounds of formula I wherein A , B , W , Y , n , and R_1 , are as described hereinabove and Q is

with the proviso that when all of A , B and W are other than N , then R and one of R_3 or R_{16} must be other than hydrogen and with the further proviso that when one of A , B or W is N , then Y , R_4 , R_5 or R_6 must be other than C_1 - C_{10} alkyl.

Compositions and methods for the protection of growing plants from attack and infestation by insects and acarina are also provided.

DETAILED DESCRIPTION OF THE INVENTION

A variety of insects and acarina cause great economic loss by damaging or destroying agricultural crops and other valuable plants; by aiding in the spread and development of bacteria, fungi and viruses that produce diseases of plants; and by destroying or lowering the value of stored foods, other products and possessions. Insects and acarina present some of the farmers' greatest problems the world over. The need for alternative and effective insect and acarid control is a global concern.

It has now been found that the substituted N-arylhydrazones derivatives of formula I are especially efficacious insecticidal and acaricidal agents, particularly against Coleoptera, Lepidoptera and Acarina.

The formula Ia amidrazone compounds of the present invention have the structural formula

wherein A, B, W, Y, n, R, R₁, R₃ and R₁₆ are described hereinabove. The term halogen as used in the specification and claims designates chlorine, fluorine, bromine or iodine. The term acid addition salts designates those salts formed by acids commonly known in the art such as hydrogen chloride, hydrogen bromide, hydrogen bisulfate, hemi-hydrogen sulfate and the like. In the above definition when n is 0 then Y is hydrogen.

Preferred compounds of the invention are those wherein R, R₃ and R₁₆ are each independently hydrogen or C₁-C₆ alkyl, A is C-R₄, B is C-R₅, W is C-R₆, Y is halogen and n is 1. Particularly preferred compounds are those wherein R₁ is hydrogen, R₄ is halogen, R₅ is hydrogen and/or R₆ is C₁-C₆ alkyl substituted with one or more halogens, preferably trifluoromethyl.

Other preferred compounds of the invention are compounds having the structure

wherein

R is C₁-C₁₀ alkyl;

R₁ is hydrogen or C₁-C₄ alkyl;

R₃ is C₁-C₁₀ alkyl;

R₁₆ is hydrogen or C₁-C₁₀ alkyl; and

R₄, R₆ and Y are each independently hydrogen, halogen, CN, NO₂, C₁-C₆ alkyl, C₁-C₆ haloalkyl, C₁-C₆ alkoxy, or C₁-C₆ haloalkoxy.

The N-arylamidrazones of formula Ia may be prepared by reacting an acid chloride, hydrazone (hydrazinoyl chloride) of formula II with an amine compound, HNR₃R₁₆, as shown in flow diagram I.

Flow Diagram I

Compounds of formula II may be prepared by reacting a suitable arylhydrazine of formula III with the appropriate acid chloride, RCOCl, to obtain an N-arylhydrazide of formula IV and reacting the formula IV hydrazide with a halogenating agent such as thionyl halide to give the desired formula II N-arylhydrazinoyl halide product. The reaction is illustrated in flow diagram II.

Flow Diagram II

20 The substituted N-arylhydrazine derivatives of the present invention are effective for controlling insect and acarid pests. Said compounds are also effective for protecting growing or harvested crops from attack and infestation by such pests.

Compounds useful in the inventive method include N-arylhydrazinoyl halide compounds of formula II. The insecticidal and acaricidal formula II hydrazinoyl halides of the present invention have the structural formula

wherein A, B, W, Y, n, R, R_1 and X_1 are described hereinabove.

Preferred compounds of formula II are those compounds wherein R_1 is hydrogen, A is $C-R_4$, B is $C-R_5$, W is $C-R_6$, Y is halogen or nitro and n is 1. Particularly preferred are those wherein R_4 is halogen, R_5 is hydrogen and R_6 is C_1 - C_6 alkyl substituted with one or more halogens, preferably trifluoromethyl.

Other preferred compounds of formula II are those in which R is optionally substituted C_3 - C_{12} cycloalkyl or C_1 - C_{10} haloalkyl, preferably C_1 - C_6 haloalkyl.

Compounds of formula II wherein X_1 is fluorine may be prepared from compounds of formula II wherein X_1 is chlorine or bromine by a halogen exchange reaction using sodium fluoride or hydrogen fluoride such as that described by March in *Advanced Organic Chemistry*, 4 Ed. (1992), p. 438.

Further compounds useful in the method of invention include substituted carboxylic acid, N-arylhydrazide compounds of formula V.

The insecticidal and acaricidal formula V N-arylhydrazides of the present invention have the structural formula

10 Preferred compounds of formula V for use in the method of the invention are those compounds wherein R is hydrogen or C₁-C₆alkyl, A is C-R₄, B is C-R₅, W is C-R₆, Y is halogen or nitro and n is 1. Particularly preferred formula V N-arylhazides are those wherein R₄ is halogen, R₅ is hydrogen and R₆ is C₁-C₆alkyl substituted with one or more halogens, preferably trifluoromethyl.

15 Compounds of formula V may be prepared by reacting a suitable arylhydrazine of formula VI with the appropriate acid chloride, RCOCl, to yield the desired N-arylhazide of formula V. The reaction is illustrated in flow diagram III.

Flow Diagram III

30 Growing or harvested crops may be protected from attack or infestation by insect or acarid pests by applying to the foliage of the crops, or to the soil or water in which they are growing, a pesticidally effective amount of a formula I N-arylhazidine derivative.

35 In practice, generally about 10 ppm to 10,000 ppm, preferably about 100 to 5,000 ppm of the formula I compound dispersed in a liquid carrier, when applied to the plants or the soil or water in which they are growing, is effective to protect the plants from insect and acarina attack and infestation. Soil application of the formula I compounds is particularly effective for the control of the post-embryonic development stages of Coleoptera and Diptera. Applications, such as spray applications, of compositions of the invention are generally effective at rates which provide about 0.125 kg/ha to about 250 kg/ha, preferably about 10 kg/ha to 100 kg/ha. Of course, it is contemplated that higher or lower rates of application of the N-arylhazidine derivatives may be used dependent upon the prevailing environmental circumstances such as population density, degree of infestation, stage of plant growth, soil conditions, weather conditions and the like.

40 Advantageously, the formula I compounds may be used in conjunction with, or in combination with other biological and chemical control agents including other insecticides, nematicides, acaricides, molluscicides, fungicides and bactericides such as nuclear polyhedrosis viruses, pyrroles, arylpyrroles, halobenzoylureas, pyrethroids, carbamates, phosphates, and the like.

45 Typical formulations suitable for the formula I N-arylhazidine derivatives are granular compositions, flowable compositions, wettable powders, dusts, microemulsions, emulsifiable concentrates and the like. All compositions which lend themselves to soil, water and foliage application and provide effective plant protection are suitable. Compositions of the invention include the formula I N-arylhazidine derivatives admixed with an inert solid or liquid carrier.

50 Where compositions of the invention are to be employed in combination treatments with other biological or chemical agents, the composition may be applied as an admixture of the components or may be applied sequentially.

55 For a more clear understanding of the invention, specific examples thereof are set forth below. These examples are merely illustrative, and are not to be understood as limiting the scope and underlying principles of the invention in any way.

EXAMPLE 1**Preparation of 2,2-Dimethylpropionic acid,2-(2,6-dichloro- α,α,α -trifluoro-p-tolyl)hydrazid**

A solution of 2,6-dichloro-4-(trifluoromethyl)phenylhydrazine (50.0 g, 0.20 mol) in methylene chloride is treated dropwise with trimethylacetyl chloride (30.6 g, 0.254 mol), stirred for 30 minutes, treated with 10% aqueous NaOH and stirred for 3 hours. The phases are separated; the organic phase is washed with water, dried over MgSO₄ and concentrated *in vacuo* to give an off-white solid residue. The solid is recrystallized from 1,2-dichloroethane to give the title product as a white solid, 55 g (82% yield), mp 140-141°, identified by ¹HNMR, ¹³CNMR and IR spectral analyses.

EXAMPLES 2-42**Preparation of substituted N-arylhydrazide derivatives**

Using essentially the same procedure described above for Example 1 and substituting the appropriate arylhydrazine and acid chloride, the compounds shown in Table I are prepared and identified by ¹HNMR, ¹³CNMR and IR spectral analyses.

Preparation of 1-chloro-2,2-dimethylpropionaldehyde, 2-(2,6-Dichloro- α,α,α -trifluoro-p-tolyl)hydrazone

A mixture of 2,2-dimethyl-2-(2,6-dichloro- α,α,α -trifluoro-p-tolyl)hydrazide propionic acid (50.0 g, 0.152 mol) and thionyl chloride (53.8 g, 0.452 mol) in toluene is heated at reflux temperature for 8 hours, cooled to room temperature and concentrated in vacuo to give an oil residue. The oil is dissolved in hexanes and passed through a silica gel filtercake. The filtercake is washed with several portions of hexanes. The filtrates are combined and concentrated in vacuo to give the title product as a yellow oil, 47.2 g (90% yield), identified by ^1H NMR, ^{13}C NMR and IR spectral analyses.

EXAMPLES 44-84

Preparation of substituted N-arylhydrazinoyl chlorides

Using essentially the same procedure as described above in Example 43 and substituting the appropriate hydrazide substrate, the compounds shown in Table II are prepared and identified by ^1H NMR, ^{13}C NMR and IR spectral analyses.

EXAMPLE 85

Preparation of N-Ethyl-2,2-dimethylpropionamide, 2-(2,6-Dichloro- α,α,α -trifluoro-p-tolyl)hydrazone

A solution of (2,6-dichloro- α,α,α -trifluoro-p-tolyl)hydrazone 1-chloro-2,2-dimethylpropionaldehyde (20.0 g, 0.0575 mol) in tetrahydrofuran is treated dropwise with 70% aqueous ethylamine (28.0 g, 0.144 mol) at room temperature, stirred for 1 hour and concentrated in vacuo to give a semi-solid residue. The semi-solid is dispersed in ether and water. The phases are separated; the organic phase is washed with water, dried over MgSO_4 and concentrated in vacuo to give the title product as a yellow oil, 19.8 g (97% yield), identified by ^1H NMR, ^{13}C NMR and IR spectral analyses.

EXAMPLES 86-169

Preparation of substituted N-arylamidrazones

Using essentially the same procedure described above in Example 85 and substituting the appropriate hydrazinoylchloride and a suitable amine, the compounds shown in Table III are prepared and identified by ^1H NMR, ^{13}C NMR and IR spectral analyses.

Hydrochloride salts of the invention may be prepared in accordance with the procedure outlined below.

Example 146 - Preparation of N-Ethyl-2,2-dimethylpropionamide,2-(2,6-dichloro- α,α,α -trifluoro-p-tolyl)hydrazone hydrochloride

A stirred mixture of N-ethyl-2,2-dimethylpropionamide, 2-(2,6-dichloro- α,α,α -trifluoro-p-tolyl)hydrazone (0.1 g, 2.8 mmol) and hexane is bubbled through with HCl gas for a 30 minute period. The resultant reaction mixture is filtered to give the title compound as a white solid, 1.13 g, mp 202-202.5°C.

EXAMPLE 170

Insecticidal and Acaricidal Evaluation of N-arylhydrazine Derivatives

Test solutions are prepared by dissolving the test compound in a 35% acetone in water mixture to give a concentration of 10,000 ppm. Subsequent dilutions are made with water as needed.

Spodoptera eridania, 3rd instar larvae, southern
armyworm

A Sieva limabean leaf expanded to 7-8 cm in length is dipped in the test solution with agitation for 3 seconds and allowed to dry in a hood. The leaf is then placed in a 100 x 10 mm petri dish containing a damp filterpaper on the bottom and ten 3rd instar caterpillars. At 3 and 5 days, observations are made of mortality, reduced feeding, or any interference with normal molting.

Tetranychus urticae(OP-resistant strain), 2-spotted spider mite

Sieva limabean plants with primary leaves expanded to 7-8 cm are selected and cut back to one plant per pot. A small piece is cut from an infested leaf taken from the main colony and placed on each leaf of the test plants. This is done about 2 hours before treatment to allow the mites to move over to the test plant to lay eggs. The size of the cut, infested leaf is varied to obtain about 100 mites per leaf. At the time of test treatment, the piece of leaf used to transfer the mites is removed and discarded. The newly mite-infested plants are dipped in the test solution for 3 seconds with agitation and set in the hood to dry. After 2 days, one leaf is removed and mortality counts are made. After 5 days, another leaf is removed and observations are made of mortality of the eggs and/or newly emerged nymphs.

Diabrotica undecimpunctata howardi, 3rd instar southern
corn rootworm

One cc of fine talc is placed in a 30 ml wide-mouth screw-top glass jar. One mL of the appropriate acetone test solution is pipetted onto the talc so as to provide 1.25 mg of active ingredient per jar. The jars are set under a gentle air flow until the acetone is evaporated. The dried talc is loosened, 1 cc of millet seed is added to serve as food for the insects and 25 mL of moist soil is added to each jar. The jar is capped and the contents thoroughly mixed on a Vortex Mixer. Following this, ten 3rd instar rootworms are added to each jar and the jars are loosely capped to allow air exchange for the larvae. The treatments are held for 6 days when mortality counts are made. Missing larvae are presumed dead, since they decompose rapidly and can not be found. The concentrations used in this test correspond approximately to 50 kg/ha.

The tests are rated according to the scale shown below and the data obtained are shown in Tables IV, V and VI.

RATING SCALE

Claims

1. A method for the control of insect or acarid pests which comprises contacting said pests or their food supply, habitat or breeding grounds with a pesticidally effective amount of a compound having the structure

(I)

wherein

A

is C-R₄ or N;

B

is C-R₅ or N;

W

is C-R₆ or N with the proviso that at least one of A, B or W must be other than N;

Y

is halogen, CN, NO₂, C₁-C₆ alkyl, C₁-C₆ haloalkyl, C₁-C₆ alkoxy or C₁-C₆ haloalkoxy;

n

is an integer of 0, 1 or 2;

Q

is

R

is hydrogen,

C₁-C₁₀alkyl optionally substituted with one or more halogens, C₃-C₆ cycloalkyl, C₁-C₄alkoxy, C₁-C₄haloalkoxy, (C₁-C₄alkyl)SO_x, (C₁-C₄haloalkyl)SO_x, phenyl optionally substituted with one to three halogen, C₁-C₄alkyl, C₁-C₄haloalkyl, C₁-C₄alkoxy, C₁-C₄haloalkoxy, (C₁-C₄alkyl)SO_x, (C₁-C₄haloalkyl)SO_x, NO₂ or CN groups, or

phenoxy optionally substituted with one to three halogen, C₁-C₄alkyl, C₁-C₄haloalkyl, C₁-C₄alkoxy, C₁-C₄haloalkoxy, (C₁-C₄alkyl)SO_x, (C₁-C₄haloalkyl)SO_x, NO₂ or CN groups,

C₃-C₁₂ cycloalkyl optionally substituted with one or more halogens, C₁-C₆alkyl, C₁-C₆haloalkyl, C₁-C₄alkoxy, C₁-C₄haloalkoxy, (C₁-C₄alkyl)SO_x, (C₁-C₄haloalkyl)SO_x,

phenyl optionally substituted with one to three halogen, C₁-C₄alkyl, C₁-C₄haloalkyl, C₁-C₄alkoxy, C₁-C₄haloalkoxy, NO₂ or CN groups, or

phenoxy optionally substituted with one to three halogen, C₁-C₄alkyl, C₁-C₄haloalkyl, C₁-C₄alkoxy, C₁-C₄haloalkoxy, NO₂ or CN groups, or

phenyl optionally substituted with one or more halogen, C₁-C₄alkyl, C₁-C₄haloalkyl, C₁-C₄alkoxy, C₁-C₄haloalkoxy, NO₂ or CN groups;

R₁ and R₂

R₃ and R₁₆

are each independently hydrogen or C₁-C₄alkyl;

are each independently hydrogen,

C₁-C₁₀alkyl optionally substituted with one or more halogen, hydroxy, C₁-C₄alkoxy, (C₁-C₄alkyl)SO_x, CONR₇R₈, CO₂R₉, R₁₀, R₁₁,

C₃-C₆cycloalkyl optionally substituted with one to three halogen, C₁-C₄alkyl, C₁-C₄haloalkyl, C₁-C₄alkoxy, C₁-C₄haloalkoxy, NO₂ or CN groups,

phenyl optionally substituted with one or more halogen, C₁-C₄alkyl, C₁-C₄haloalkyl, C₁-C₄alkoxy, C₁-C₄haloalkoxy, CO₂ or CN groups, or

pyridyl optionally substituted with one or more halogen, C₁-C₄alkyl, C₁-C₄haloalkyl, C₁-C₄alkoxy, C₁-C₄haloalkoxy, NO₂ or CN groups,

C₃-C₁₀alkenyl optionally substituted with one or more halogen, hydroxy, C₁-C₄alkoxy, (C₁-C₄alkyl)SO_x, CONR₇R₈, CO₂R₉, R₁₀, R₁₁,

C₃-C₆cycloalkyl optionally substituted with one to three halogen, C₁-C₄alkyl, C₁-C₄haloalkyl, C₁-C₄alkoxy, C₁-C₄haloalkoxy, NO₂ or CN groups,

phenyl optionally substituted with one or more halogen, C₁-C₄alkyl, C₁-C₄haloalkyl, C₁-C₄alkoxy, C₁-C₄haloalkoxy, CO₂ or CN groups, or

pyridyl optionally substituted with one or more halogen, C₁-C₄alkyl, C₁-C₄haloalkyl, C₁-C₄alkoxy, C₁-C₄haloalkoxy, NO₂ or CN groups,

C₃-C₁₀alkynyl optionally substituted with one or more halogen, hydroxy, C₁-C₄alkoxy, (C₁-C₄alkyl)SO_x, CONR₇R₈, CO₂R₉, R₁₀, R₁₁,

C₃-C₆cycloalkyl optionally substituted with one to three halogen, C₁-C₄alkyl, C₁-C₄haloalkyl, C₁-C₄alkoxy, C₁-C₄haloalkoxy, NO₂ or CN groups,

phenyl optionally substituted with one or more halogen, C₁-C₄alkyl, C₁-C₄haloalkyl, C₁-C₄alkoxy, C₁-C₄haloalkoxy, CO₂ or CN groups, or

pyridyl optionally substituted with one or more halogen, C₁-C₄alkyl, C₁-C₄haloalkyl, C₁-C₄alkoxy, C₁-C₄haloalkoxy, NO₂ or CN groups,

C₃-C₁₂cycloalkyl optionally substituted with one or more halogen, hydroxy, C₁-C₄alkoxy, (C₁-C₄alkyl)SO_x, CONR₇R₈, CO₂R₉, R₁₀, R₁₁,

C₃-C₆cycloalkyl optionally substituted with one to three halogen, C₁-C₄alkyl, C₁-C₄haloalkyl, C₁-C₄alkoxy, C₁-C₄haloalkoxy, NO₂ or CN groups,

phenyl optionally substituted with one or more halogen, C₁-C₄alkyl, C₁-C₄haloalkyl, C₁-C₄alkoxy, C₁-C₄haloalkoxy, CO₂ or CN groups, or

pyridyl optionally substituted with one or more halogen, C₁-C₄alkyl, C₁-C₄haloalkyl, C₁-C₄alkoxy, C₁-C₄haloalkoxy, NO₂ or CN groups or

may be taken together to form a ring represented by the structure

R₄, R₅ and R₆

are each independently hydrogen, halogen, CN, NO₂, (C₁-C₄alkyl)-SO_x, (C₁-C₄haloalkyl)SO_x, C₁-C₆alkyl, C₁-C₆haloalkyl, C₁-C₆alkoxy or C₁-C₆haloalkoxy;

R₇, R₈ and R₉

are each independently hydrogen or C₁-C₄alkyl;

R₁₀

is NR₁₂R₁₃,

R₁₁

is

R₁₂, R₁₃, R₁₄ and R₁₅

are each independently hydrogen or C₁-C₄alkyl;

X

is O, S or NR₁₄;

X₁

is chlorine, bromine or fluorine;

r

is an integer of 0 or 1;

p and m

are each independently an integer of 0, 1, 2 or 3 with the proviso that only one of p, m or r can be 0 and with the further proviso that the sum of p + m + r must be 4, 5 or 6;

x

is an integer of 0, 1 or 2; or

the acid addition salts thereof with the proviso that when Q is

R is C₁-C₅alkyl and X₁ is chlorine, then either at least one of A, B or W must be N or R₄, R₅, R₆ and Y must be other than hydrogen and n must be 0 and with the further proviso that when Q is

R is phenyl or substituted phenyl and X₁ is chlorine, then at least one of A, B or W must be N.

2. The method according to claim 1 wherein

Q is

3. The method according to claim 2 wherein A is C-R₄, B is CH, W is C-R₆, Y is halogen, n is 1, R₁ is hydrogen, R₄ and R₆ are each independently halogen or C₁-C₆alkyl substituted with one or more halogens, and R, R₃ and R₁₆ are each independently hydrogen or C₁-C₁₀alkyl.

4. The method according to claim 1 wherein Q is

5. The method according to claim 4 wherein R₁ and R₂ are hydrogen, R is C₁-C₆alkyl, A is C-R₃, B is C-R₄, W is C-R₅, Y is halogen, n is 1, R₃ is halogen, R₄ is hydrogen and R₅ is C₁-C₆alkyl substituted with one or more halogens.

6. The method according to claim 5 wherein the compound is 2,2-dimethylpropionic acid, 2-(2,6-dichloro- α,α,α -trifluoro-p-tolyl)hydrazide.

7. A compound having the structure

wherein A, B, W, Y, n, R, R₁, R₃ and R₁₆ are described in claim 1 with the proviso that when all of A, B and W are other than N, then R and one of R₃ or R₁₆ are other than hydrogen and with the further proviso that when one of A, B or W is N, then Y, R₄, R₅ or R₆ must be other than C₁-C₁₀alkyl.

8. The compound according to claim 7 having the structure

wherein

- | | |
|---------------------------------------|---|
| R | is C ₁ -C ₁₀ alkyl; |
| R ₁ | is hydrogen or C ₁ -C ₄ alkyl; |
| R ₃ | is C ₁ -C ₁₀ alkyl; |
| R ₁₆ | is hydrogen or C ₁ -C ₁₀ alkyl; and |
| R ₄ , R ₆ and Y | are each independently hydrogen, halogen, CN, NO ₂ , C ₁ -C ₆ alkyl, C ₁ -C ₆ haloalkyl, |

C₁-C₆ alkoxy or C₁-C₆ haloalkoxy.

9. The compound according to claim 8 N-ethyl-2,2- dimethylpropionamide, 2-(2,6-dichloro- α,α,α -trifluoro-p-tolyl)hydrazone

10. A process for the preparation of a compound having the structure

wherein A, B, W, Y, n, R, R₁, R₃ and R₁₆ are described in claim 1 which comprises reacting a compound having the structure

with at least one molar equivalent of an amine compound, HNR₃R₁₆.

11. A composition for controlling insect or acarid pests which comprises an inert liquid or solid carrier and a pesticidally effective amount of a compound of formula I

(I)

wherein A, B, W, Y, n, R₁ and Q are described in claim 1.

12. The composition according to claim 11 wherein the formula I compound has the structure

and
R
R₁

is C₁-C₁₀ alkyl;
is hydrogen or C₁-C₄ alkyl;

R₃ is C₁-C₁₀alkyl;
R₁₆ is hydrogen or C₁-C₁₀alkyl; and
R₄, R₆ and Y are each independently hydrogen, halogen, CN, NO₂, C₁-C₆alkyl, C₁-C₆ haloalkyl,
C₁-C₆alkoxy or C₁-C₆ haloalkoxy.
